

A Precursor to the Beloved

The Daughtry Times®
Education through Integration™

February 2004

1. Abera makes his home with his father and his mother. Running errands is his household duty. His mother and father are sometimes employed as farmers. There are 3 children in the family. Abera is not attending school because he lacks sufficient finances. Soccer and running are his favorite activities. He also attends Sunday school regularly. Because of your financial contributions, Abera will have new opportunities to learn and grow physically, mentally, and spiritually. From January 26 – February 26, 2004, Mr. Daughtry's classes assisted in this sponsorship taking in approximately 619 pennies, 40 one-dollar bills (to include 3 fives made into smaller change), 109 quarters, 130 dimes and 92 nickels. What was the total intake? What was the average daily contribution over 20 school days? And what was the average period (5 classes) contribution over the 20 days?

2. In the 2000 Presidential election, George Walker Bush had 48% of the votes with a total of 50,456,169 where he won 30 states. Al Gore Jr. also had 48%, which consisted of 50,996,116 votes and won 21 states. In Washington State, Gore defeated Bush 1,240,302 to 1,101,621 whereas in Georgia, Bush defeated Gore 1,416,085 to 1,110,755. How many more votes did Bush have in Georgia and how many more did Gore have over Bush in Washington? How many total votes did Bush win the election by? In your opinion, did Bush win the election?
